

# Our Class Math Motto

There are many different approaches to solving a problem.  
There is no one right way.

It takes **courage** to be willing to risk a new approach.  
**DARE TO BE DIFFERENT!**

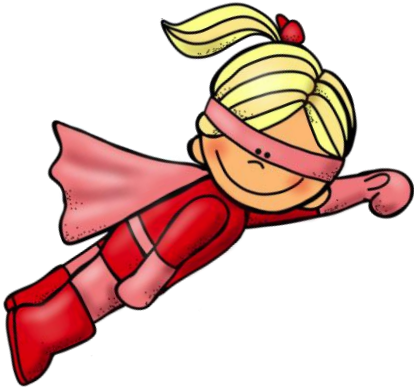

Some problems have one correct answer.  
Some problems have many correct answers.  
Some problems have NO correct answers.

Mathematicians make models, draw pictures,  
write and discuss mathematics. So do we!

Tools such as manipulatives, calculators and  
computers can be used whenever we need them.

If we don't know how to solve a problem right  
away, we can figure out a way to do it.  
We don't have to know everything today.

Everyone has a right to time to think.

We are free to make mistakes.  
We learn from our mistakes.

We can pose and create our own math problems.

We respect the rights of others.  
We help each other do and learn mathematics.

It is intelligent to ask for help or assistance.

**Everyone is successful in math class!**
